Safeguard offers much needed security

with current rise in crime

Safeguard Security has consolidated its presence on Telford Road in Graniteside by moving its engineering division from elsewhere in Graniteside to premises it acquired just over a year ago, close to its headquarters on the same road.

Safeguard's security guard, cash-in-transit, engineering, Closed Circuit Television (CCTV) monitoring and investigations services are now all situated on Telford Road.

In recent months crime has increased particularly robberies, thefts and burglaries all showing no signs of abating. Thus this might be a good time for individuals and businesses in Graniteside who desire greater protection to visit Safeguard or give it a ring to see what it can do to improve their security.

Safeguard is happy to visit any premises, in Graniteside or anywhere else in Harare or Zimbabwe, to assess the security needs and provide a free quotation.

With more than 40 years' experience in the security industry in Zimbabwe, Safeguard has a wide range of security services to offer. These range from physical security barriers such as security gates and burglar bars to security guards, alarms, closed circuit television (CCTV) cameras, an outstanding rapid response service and private investigations.

What is happening is also automatically viewed and analysed for a report sent

This report may help the business address security issues but to improve the efficiency of its business processes.

Where home security is concerned some of which are now being manufactured offer additional protection to a home with alarms, especially when linked to a rapid response service, and CCTV cameras.

Businesses in Graniteside and elsewhere take advantage of Safeguard's investment to investigate possible frauds at their premises with honesty of prospective and current clients through a Voice Stress Analysis (VSA) test.

Whenever security matters and it has never mattered more than at the present time a visit to or a call from Safeguard is likely to provide you with the most appropriate security
